

Thank you all very much for taking part in our survey, below is a chart of the results:

A fantastic 63% of you walked to school, 33% drove and 3% cycled. Of those who drove, 29% parked close to the school and 4% parked outside the 5 min walk zone.

#### Next Steps:

- In order to reduce road danger for the 66% of families who walk or cycle to school, we would like to reduce the number of cars that drive past and park outside the school *during the busy school run*.
- We would like to encourage those families who drive to think about where they drive and park.

#### Exercise:

1. Using the A1 map, locate your start point and consider your family's onward journey.
2. Look for any quiet side roads between your house and the school, perhaps around the 5 min walk zone.
3. Are there roads that would be easy and safe to park in?
4. Remember, the further away from the school you park, the more diluted the demand on spaces, making it easier to find a space.
5. Is there somewhere you could park that doesn't take you past the school itself but sets you up for your onward journey?
6. How long does it take to walk that short distance?
7. How much earlier would you have to leave the house for your whole family to still be on time?
